

Query results

PostgreSQL analysis of the 30,020-entry Module 2 snapshot. All 11 questions below were executed against the database; the SQLAlchemy results agree. Later live pulls can change the answers.

Q1. How many entries are for Fall 2026?

Entries
29597

SQL

```
SELECT COUNT(*) FROM applicants
WHERE term ILIKE 'Fall 2026';
```

Count entries whose term is Fall 2026, ignoring letter case.

Q2. What percentage of classified entries are international?

International
46.33%

SQL

```
SELECT 100.0 * COUNT(*) FILTER (
  WHERE us_or_international ILIKE 'International'
) / NULLIF(COUNT(*), 0)
FROM applicants
WHERE LOWER(us_or_international) IN ('american', 'international', 'other');
```

The denominator includes American, International, and Other. Missing or unrecognized classifications are excluded. Other is not counted as International.

Denominator: 29,481 classified entries; numerator: 13,660 international entries. The 539 missing classifications are excluded.

Q3. What are the average GPA, GRE Quantitative, GRE Verbal, and GRE AW?

GPA	GRE Q	GRE V	GRE AW
3.79	259.90	161.53	8.34

SQL

```
SELECT AVG(gpa), AVG(gre), AVG(gre_v), AVG(gre_aw)
FROM applicants;
```

Each AVG ignores only its own missing values. An applicant with a GPA but no GRE still contributes to the GPA average. The collected GRE field is used as GRE Quantitative, as requested by the assignment.

Non-missing counts: GPA 18,118; GRE 2,392; GRE V 2,006; GRE AW 1,887. Some stored scores are outside current GRE ranges; these averages are not verified test-score estimates. See limitations.pdf.

Q4. What is the average GPA of American Fall 2026 applicants?

GPA

3.79

SQL

```
SELECT AVG(gpa) FROM applicants
WHERE term ILIKE 'Fall 2026'
      AND us_or_international ILIKE 'American';
```

Filter to American Fall 2026 entries, then average their available GPAs.

Q5. What percentage of Fall 2025 entries are acceptances?

Accepted

47.92%

SQL

```
SELECT 100.0 * COUNT(*) FILTER (
  WHERE status ILIKE 'Accepted%'
) / NULLIF(COUNT(*), 0)
FROM applicants
WHERE term ILIKE 'Fall 2025';
```

Divide accepted Fall 2025 entries by ALL Fall 2025 entries, including entries with other or missing decisions. NULLIF avoids division by zero.

92 accepted entries / 192 Fall 2025 entries = 47.92%.

Q6. What is the average GPA of accepted Fall 2026 applicants?

GPA

3.78

SQL

```
SELECT AVG(gpa) FROM applicants
WHERE term ILIKE 'Fall 2026'
      AND status ILIKE 'Accepted%';
```

Average available GPAs among entries reporting acceptance for Fall 2026.

Q7. How many Johns Hopkins master's Computer Science entries are there?

Entries

8

SQL

```
SELECT COUNT(*) FROM applicants
WHERE program ~* '\m(computer\s+science|cs)\M'
      AND program ~* '\m(johns?s+hopkins|jhu)\M'
      AND LOWER(degree) IN (
        'masters', 'master', 'master's', 'ms', 'm.s.',
        'msc', 'm.sc.', 'ma', 'm.a.', 'meng', 'm.eng.'
      );
```

Use the original combined program field and degree. Match Johns/John Hopkins or JHU and Computer Science or CS, with common master's degree spellings. No term or acceptance filter is requested here. PostgreSQL ~* means a case-insensitive pattern; \m and \M mark word boundaries.

Q8. How many Fall 2026 CS PhD acceptances are at Georgetown, MIT, Stanford, or Carnegie Mellon (original names)?

Entries

28

SQL

```
SELECT COUNT(*) FROM applicants
WHERE term ILIKE 'Fall 2026'
      AND status ILIKE 'Accepted%'
      AND LOWER(REPLACE(degree, '.', '')) = 'phd'
      AND program ~* '\m(computer\s+science|cs)\M'
      AND (program ~* '\m(georgetown|stanford|carnegie mellon|cmu)\M'
           OR program ~* '\m(massachusetts institute of technology|mit)\M');
```

Use original program names with common university aliases. Word boundaries prevent MIT from matching inside an unrelated word. Each entry is counted once.

Q9. Does the previous count change when LLM-generated names are used?

Original	LLM	Difference
28	28	0

SQL

```
WITH counts AS (
  SELECT
    COUNT(*) FILTER (
      WHERE program ~* '\m(computer\s+science|cs)\M'
      AND (program ~* '\m(georgetown|stanford|carnegie mellon|cmu)\M'
      OR program ~* '\m(massachusetts institute of technology|mit)\M')
    ) AS original_count,
    COUNT(*) FILTER (
      WHERE llm_generated_program ~* '\m(computer\s+science|cs)\M'
      AND (
        llm_generated_university ~* '\m(georgetown|stanford|carnegie mellon|cmu)\M'
        OR llm_generated_university ~* '\m(massachusetts institute of technology|mit)\M'
      )
    ) AS llm_count
  FROM applicants
  WHERE term ILIKE 'Fall 2026'
  AND status ILIKE 'Accepted%'
  AND LOWER(REPLACE(degree, '.', '')) = 'phd'
)
SELECT original_count, llm_count, llm_count - original_count
FROM counts;
```

Keep term, status, and degree unchanged. Compare original names with the two LLM fields. Difference means LLM minus original. Standardization may recover aliases, but model mistakes or changed program labels may also remove or add matches.

In this snapshot both counts are 28, so the difference is 0. Equal totals alone do not establish that every name was standardized correctly.

Q10. Extra: How many Fall 2026 entries report each degree?

Degree	Entries
PhD	21009
Masters	7450
MFA	601
PsyD	295
Other	206

EdD	15
JD	14
MBA	7

SQL

```
SELECT COALESCE(degree, 'Unknown') AS reported_degree,
       COUNT(*) AS entries
FROM applicants
WHERE term ILIKE 'Fall 2026'
GROUP BY COALESCE(degree, 'Unknown')
ORDER BY entries DESC, reported_degree;
```

Group Fall 2026 entries by reported degree. Unknown retains entries without a degree. This shows which degree levels dominate this sample.

Q11. Extra: How does reported GPA compare between Fall 2026 acceptances and rejections?

Decision	Entries	With GPA	GPA
accepted	10983	7271	3.78
rejected	13949	8152	3.79

SQL

```
SELECT LOWER(status) AS decision, COUNT(*) AS entries,
       COUNT(gpa) AS with_gpa, AVG(gpa) AS average_gpa
FROM applicants
WHERE term ILIKE 'Fall 2026'
      AND LOWER(status) IN ('accepted', 'rejected')
GROUP BY LOWER(status)
ORDER BY decision;
```

Compare accepted and rejected entries after the loader extracts the decision from the status text. Show GPA coverage alongside averages. These groups are self-selected reports, so a GPA difference does not establish a cause of admission.
